exp:checkclasses

Source file: doc/eng-us/examples/commands/checkclasses.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/commands/checkclasses.md

Load every declared class and report the ones PHP refuses to load.

Script `bin/php/checkclasses.php`, code in `kernel/private/classes/commands/checkclasses.php`. Run it from the installation root, as the user the web server runs as:

Shell

```
./console exp:checkclasses --help
php bin/php/checkclasses.php --help
```

Help text

```
Exponential class loader check
Loads every class this installation declares and reports the ones php refuses.

./bin/php/checkclasses.php
```

Options

Option	Value	Help
`--kernel`		Check the kernel classes as well as the extension ones. Slower, and they are the ones least likely to be wrong.
`--tests`		Include classes that live under a tests directory. Left out by default: they are usually written against whichever version of phpunit was current, and a test class that will not load breaks nothing anybody is looking at.
`--quiet-ok`		Print nothing when everything loads.

Read from the option definitions in the code (`startup()`, `getOptions()`, `options()` or `ezcConsoleOption`). Every script also takes the standard options of the script framework (`--help`, `--siteaccess`, `--debug`, `--quiet`, `--allow-root-user` ...).
