The system card: the Exponential "e" next to the facts of this installation, its engine and its machine, with health hints (exp:info adds an inventory, exp:about the project).

Script `bin/php/expfetch.php`, code in `kernel/private/classes/commands/syscard.php`. Run it from the installation root, as the user the web server runs as:

Shell

```
./console exp:expfetch --help
./console exp:info --help
./console exp:about --help
php bin/php/expfetch.php --help
```

Help text

```
The system card of this installation, drawn next to the Exponential "e"

./console exp:expfetch                     Exponential, the machine, PHP, the engine, the databas
e and the site
./console exp:info                         the same and an inventory: extensions and versions, si
teaccesses,
                                           settings, cronjobs, the queue, cache sizes, help cover
age
./console exp:about                        the same and the project: what Exponential is, license
, links
./console exp:expfetch --plain             plain text to paste (no logo, no colors)
./console exp:info --json --no-logo        one JSON document, e.g. for a support request or monit
oring
./console exp:expfetch --section=php,engine  only these sections
./console exp:expfetch --watch=2           refresh every 2 seconds (Ctrl-C stops)
./console exp:expfetch --theme=light       darker colors for a light terminal (also orange, mono,
 high-contrast)
./console exp:expfetch --color=256 --width=100 --animate
./console exp:expfetch --completion=bash >> ~/.bashrc

Colors only on a terminal, never with NO_COLOR set; the depth (truecolor, 256, 16) is taken from
COLORTERM
and TERM. The facts come from the providers of settings/syscard.ini, each with a time budget: one
 that takes
too long shows n/a. Nothing is changed, and no password, key, token or full database address is p
rinted.
Exit code: 0, or 2 for a wrong option.
```

Options

Option	Value	Help
--json		

Option	Value	Help
`--plain`		
`--no-logo`		
`--section`	required	
`--no-color`		
`--color`	required	
`--theme`	required	
`--width`	required	
`--ascii`		
`--no-hints`		
`--no-bars`		
`--watch`	optional	
`--count`	required	
`--animate`		
`--mode`	required	
`--list-providers`		
`--list-themes`		
`--completion`	required	

Read from the option definitions in the code (`startup()`, `getOptions()`, `options()` or `ezcConsoleOption`). Every script also takes the standard options of the script framework (`--help`, `--siteaccess`, `--debug`, `--quiet`, `--allow-root-user` ...).
