Extension points in module.ini

Settings of module.ini that list handlers, classes or directories an extension can add to (2, found by name).

Source file: doc/eng-us/examples/extension-points/module.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/extension-points/module.md

Settings of `settings/module.ini` whose name says they hold handlers, classes, filters, providers or directories that an extension can add to or replace. **Found by the setting's name: a heuristic.** Read the setting's comment (linked) before relying on it.

An extension adds to a list in its own `settings/module.ini.append.php` (active extensions' settings are read after the kernel's and before `settings/override`):

ModuleSettings ModuleRepositories

Shipped: a list of 2: `kernel`, `kernel/private/modules`. The setting.

INI

```
<?php /* #?ini charset="utf-8"?
# extension/expexample/settings/module.ini.append.php
[ModuleSettings]
ModuleRepositories[]=expExampleModuleRepositorie    # your class or value, added to the list
*/ ?>
```

ModuleSettings ExtensionRepositories

Shipped: an empty list. The setting.

INI

```
<?php /* #?ini charset="utf-8"?
# extension/expexample/settings/module.ini.append.php
[ModuleSettings]
ExtensionRepositories[]=expExampleExtensionRepositorie    # your class or value, added to the lis
t
*/ ?>
```
