fetch('datatable', 'count')

The fetch function count of the datatable module: 2 parameter(s), 1 required.

Source file: doc/eng-us/examples/fetch-functions/datatable/count.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/fetch-functions/datatable/count.md

Defined in `kernel/datatable/function_definition.php`; it calls `expDataTableFunctionCollection::fetchCount()` (`kernel/classes/datatable/expdatatablefunctioncollection.php`).

Parameters

Parameter	Type	Required	Default
class	string	yes	
conditions	array	no	false

Example

In a template (the values are placeholders of each parameter's type):

Template

```
{def $result = fetch( 'datatable', 'count', hash( 'class', 'class' ) )}
{* with every parameter *}
{def $all = fetch( 'datatable', 'count', hash( 'class', 'class',
                                               'conditions', array() ) )}
```

In PHP, the same function through the function handler (`lib/ezutils/classes/ezfunctionhandler.php`):

PHP

```
$result = eZFunctionHandler::execute( 'datatable', 'count', array( 'class' => 'class' ) );
```
