content.ini [NamePatternSettings]

The settings of [NamePatternSettings] in content.ini: ResolverClasses

Source file: `doc/eng-us/examples/ini-settings/content/NamePatternSettings.md` Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/ini-settings/content/NamePatternSettings.md

The block `[NamePatternSettings]` of `settings/content.ini`, with 1 setting(s).

Never edit `settings/content.ini` itself: an update replaces it. Put the settings you change in an override, which wins over the shipped file:

- `settings/override/content.ini.append.php` for every siteaccess,
- `settings/siteaccess/<siteaccess>/content.ini.append.php` for one siteaccess,
- `extension/<extension>/settings/content.ini.append.php` in an extension (read when the extension is active).

ResolverClasses

> PHP classes a content class's object name pattern or URL alias name pattern may name in braces at its start, for example {myNameResolver} or {myNameResolver} <title>: the class then makes the name. A listed class must implement expNamePatternResolverInterface; a name that is not listed here is ignored (and logged), and the pattern is resolved from its attribute tokens. Empty by default.

Default: an empty list.

INI

```
<?php /* #?ini charset="utf-8"?
# settings/override/content.ini.append.php
[NamePatternSettings]
# an empty "ResolverClasses[]" first replaces the shipped list; without it the items are added
ResolverClasses[]
*/ ?>
```
