The view content/action: its address, parameters and the policy functions it needs.

A view of the `content` module, defined in `kernel/content/module.php` and run by `kernel/content/action.php`.

Address

```
/content/action
```

Who may open it

The user needs this policy function:

- `content/read`

A policy on `content/*` (every function) also grants it; limitations of the policy (section, subtree, class ...) still apply where the view checks them.
