/package/create

The view package/create: its address, parameters and the policy functions it needs.

Source file: doc/eng-us/examples/module-views/package/create.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/module-views/package/create.md

A view of the `package` module, defined in `kernel/package/module.php` and run by `kernel/package/create.php`.

Address

```
/package/create/(creator)/<Creator>/(node)/<NodeID>/(subtree)/<Subtree>/(classes)/<IncludeClasses>/(versions)/<Versions>
```

Unordered parameters, in any order as `/(name)/value`: `(creator)` sets `Creator`, `(node)` sets `NodeID`, `(subtree)` sets `Subtree`, `(classes)` sets `IncludeClasses`, `(versions)` sets `Versions`.

Who may open it

The user needs this policy function:

- `package/create`

A policy on `package/*` (every function) also grants it; limitations of the policy (section, subtree, class ...) still apply where the view checks them.

Details

Key	Value
Navigation part	`ezsetupnavigationpart`
UI context	`edit`
Single POST actions	CreatePackageButton: CreatePackage, PackageStep: PackageStep
POST action parameters	CreatePackage (CreatorItemID: CreatorItemID), PackageStep (CreatorItemID: CreatorItemID, CreatorStepID: CreatorStepID, PreviousStep: PreviousStepButton, NextStep: NextStepButton)

Example

A link in a template (`ezurl` adds the siteaccess and quotes the address); the parameter values are placeholders:

Template

```
<a href={'/package/create'|ezurl}>package/create</a>
<a href={concat( '/package/create/(creator)/', 1 )|ezurl}>package/create</a>
```

From PHP, the redirect a view gives after it has done its work:

PHP

```php
return $Module->redirectTo( '/package/create' );
```
