# /state/groups

The view state/groups: its address, parameters and the policy functions it needs.

Source file: doc/eng-us/examples/module-views/state/groups.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/module-views/state/groups.md

A view of the `state` module, defined in `kernel/state/module.php` and run by `kernel/state/groups.php`.

## Address

```
/state/groups/(offset)/<Offset>
```

Unordered parameters, in any order as `/(name)/value`: `(offset)` sets `Offset`.

## Who may open it

The user needs this policy function:

- `state/administrate`

A policy on `state/*` (every function) also grants it; limitations of the policy (section, subtree, class ...) still apply where the view checks them.

## Details

| Key | Value |
|---|---|
| Navigation part | ezsetupnavigationpart |
| Single POST actions | CreateButton: Create, RemoveButton: Remove |
| POST action parameters | Remove (RemoveIDList: RemoveIDList) |

## Example

A link in a template (`ezurl` adds the siteaccess and quotes the address); the parameter values are placeholders:

**Template**

```
<a href={'/state/groups'|ezurl}>state/groups</a>
<a href={concat( '/state/groups/(offset)/', 1 )|ezurl}>state/groups</a>
```

From PHP, the redirect a view gives after it has done its work:

**PHP**

```
return $Module->redirectTo( '/state/groups' );
```
