attribute template operator

The attribute template operator: 3 parameter(s), registered by eZTemplateAttributeOperator.

Source file: doc/eng-us/examples/template-operators/attribute.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/template-operators/attribute.md

The attribute template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateAttributeOperator` (`lib/eztemplate/classes/eztemplateattributeoperator.php`). The same class also registers: dump.

Parameters

Parameter	Type	Required	Default
show_values	string	no	''
max_val	numerical	no	2
format	boolean	no	'html'

The operator works on its input: the value before `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{$value|attribute( 'show_values', 2, 'html' )}
```

In a shipped template

The first use in the templates of this installation, `design/admin/templates/shop/dashboard.tpl` line 240:

Template

```
<p class="a4-shop-note">{'A class is a product class when it has a price attribute (%types). Only
 its published objects can be added to the basket.'|i18n( $ctx, , hash( '%types', 'ezprice, ezmul
tiprice' ) )}</p>
```
