wrap template operator

The wrap template operator: 3 parameter(s), registered by eZTemplateStringOperator.

Source file: doc/eng-us/examples/template-operators/wrap.md Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/examples/template-operators/wrap.md

The wrap template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateStringOperator` (`lib/eztemplate/classes/eztemplatestringoperator.php`). The same class also registers: upcase, downcase, count_words, count_chars, trim, break, upfirst, upword, simplify, trim, wash, chr, ord, shorten, pad.

Parameters

Parameter	Type	Required	Default
wrap_at_position	integer	no	false
break_sequence	string	no	false
cut	boolean	no	false

The operator works on its input: the value before `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{$value|wrap( 1, 'break_sequence', true() )}
```

In a shipped template

The first use in the templates of this installation, `design/admin/templates/content/edit_locations.tpl` line 37:

Template

```
{* the table scrolls inside its column instead of overflowing it, and its headings wrap (modules/
content.css, as in admin4) *}
```
