Documentation as code

How Exponential treats its documentation like code - Markdown files in doc/ versioned with the kernel, served by the help system inside the administration, front matter that drives audiences and search, a link and image...

Source file: `doc/eng-us/help/software-engineers/documentation-as-code.md` Last changed 2026-11-04
https://doc.exponential.earth/exphelp/viewer/help/software-engineers/documentation-as-code.md

This page is for engineers who write documentation with their change, or who maintain the documentation of an extension. In Exponential the documentation lives in the repository, is reviewed in the same pull request as the code, is checked by a command, and is read inside the product. The feature page is The help system.

Where the documentation lives

Kind	Directory
Help pages by audience	`doc/eng-us/help/` (this page is in `doc/eng-us/help/software-engineers/`)
Feature pages	`doc/eng-us/features/6.0/`
Upgrade notes	`doc/eng-us/bc/6.0/`
Guides	`doc/eng-us/guides/`
Standards and specifications	`doc/eng-us/standards/`, `doc/eng-us/specifications/`
Installation book	`doc/eng-us/install/`
Changelogs	`doc/changelogs/`
Other languages	`doc/ger-de/` and further directories of `exphelp.ini [DocLanguages]`

How it is served

The help system shows every **git-tracked** Markdown and text file below `doc/` in the administration (`/exphelp/viewer/<path>`), with headings, a table of contents, tables, highlighted code, the navigation of its section and a link to the file on GitHub; a search finds pages by title, headings and text with filters for audience, category and type. Reading the help needs the policy `exphelp/read`. A file that git does not track is not a page, so a new page

appears in the help once it is committed.

Front matter

Help pages start with a YAML-style block:

Key	Purpose
`title`	the page title, also the H1
`audience`	one or more audiences, which drive the filters and the dashboard cards
`category`	the category in the help
`order`	the order within the folder
`summary`	the description in search results and listings
`keywords`	extra search terms
`featured`	shown among the featured pages
`type`	the kind of page, for example `help`

Checking pages

Shell

```
./console exp:help check --below=help/software-engineers/   # links and images of the pages below
 a path
./console exp:help search "clear cache"                      # what readers will find
./console exp:help show guides/caches.md                     # the metadata and headings of one p
age
./console exp:help index --rebuild                           # rebuild the index
```

The check reports errors (a link to a missing file, a link that leaves the installation, an unsafe scheme, a broken image), warnings (an anchor no heading has, an absolute link) and notices (a link to a file that is not a help page). `--strict` makes warnings fail too. Use relative links only, and link anchors to headings that exist.

Documentation of extensions

The help shows the documentation every active extension brings (its `doc/` directory, README, CHANGELOG, LICENSE) under `/exphelp/extensions`, in the same viewer and search (Help system for extensions, Documenting your extension). The convention is the same docs as code: `README.md` and `INSTALL.md` on top of `extension/<name>/`, every other page as Markdown (`.md`) in `extension/<name>/doc/`, in English (Documenting an extension).

Writing rules

- Write what exists. Verify every claim in the code, the settings or another page, and say so where the sources do not answer.
- Name the product Exponential. Identifiers such as `eZContentObject` stay as they are; the old product name appears only as history.
- Real commands only in code blocks; no host names, accounts or passwords of a real

installation.

- American English in the interface and the documentation.
- A behavior change gets its upgrade note, a feature its page, a release its changelog (Changelogs and upgrade notes).

Help topics maintained as content in the administration follow their own style guide and review states (Help style guide, Keeping the help up to date).

License

The documentation is free under the GNU Free Documentation License 1.3; the code is under the GNU GPL, version 2 or later (Free documentation, Documentation and publishing standards).
