exp:expstaticpush

Source file: doc/eng-us/examples/commands/expstaticpush.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/commands/expstaticpush.md

Push the static publishing targets whose push failed again (runs with push state pending), never forced.

Script `bin/php/expstaticpush.php`, code in `kernel/private/classes/commands/expstaticpush.php`. Run it from the installation root, as the user the web server runs as:

Shell

```
./console exp:expstaticpush --help
./console exp:static:push --help
php bin/php/expstaticpush.php --help
```

Help text

```
Push waiting static publishes again
A publish whose push failed (the remote was not reachable, the credential was missing) keeps its
commit and tag in the target's folder with the push state pending. This command pushes those
targets again, the branch with every commit and the tags, never forced. The cronjob part
staticpublish does the same.

./console exp:static:push                       every target with a waiting push
./console exp:static:push github-public
```

Options

Option	Value	Help
`--format`	required	text (default) or json (the machine output exp-static/1)

Read from the option definitions in the code (`startup()`, `getOptions()`, `options()` or `ezcConsoleOption`). Every script also takes the standard options of the script framework (`--help`, `--siteaccess`, `--debug`, `--quiet`, `--allow-root-user` ...).

Arguments: `[target]`.
