Extension points in error.ini

Settings of error.ini that list handlers, classes or directories an extension can add to (3, found by name).

Source file: doc/eng-us/examples/extension-points/error.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/extension-points/error.md

Settings of `settings/error.ini` whose name says they hold handlers, classes, filters, providers or directories that an extension can add to or replace. **Found by the setting's name: a heuristic.** Read the setting's comment (linked) before relying on it.

An extension adds to a list in its own `settings/error.ini.append.php` (active extensions' settings are read after the kernel's and before `settings/override`):

ErrorSettings DefaultErrorHandler

Shipped: `displayerror`. The setting.

INI

```ini
<?php /* #?ini charset="utf-8"?
# extension/expexample/settings/error.ini.append.php
[ErrorSettings]
DefaultErrorHandler=displayerror    # replace with your class or value
*/ ?>
```

ErrorSettings-kernel ErrorHandler

Shipped: a hash of 1: `1=embed`. The setting.

INI

```ini
<?php /* #?ini charset="utf-8"?
# extension/expexample/settings/error.ini.append.php
[ErrorSettings-kernel]
ErrorHandler[expexample]=expExampleErrorHandler    # key and value are yours
*/ ?>
```

ErrorSettings-shop ErrorHandler

Shipped: an empty list. The setting.

INI

```ini
<?php /* #?ini charset="utf-8"?
# extension/expexample/settings/error.ini.append.php
[ErrorSettings-shop]
ErrorHandler[]=expExampleErrorHandler    # your class or value, added to the list
*/ ?>
```
