fetch('content', 'node')

The fetch function node of the content module: 4 parameter(s), 0 required.

Source file: doc/eng-us/examples/fetch-functions/content/node.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/fetch-functions/content/node.md

Defined in `kernel/content/function_definition.php`; it calls `eZContentFunctionCollection::fetchContentNode()` (`kernel/content/ezcontentfunctioncollection.php`). Operation type: read.

Parameters

Parameter	Type	Required	Default
node_id	integer	no	false
node_path	string	no	false
language_code	string	no	false
remote_id	string	no	false

Example

In a template (the values are placeholders of each parameter's type):

Template

```
{def $result = fetch( 'content', 'node', hash( 'node_id', 1 ) )}
{* with every parameter *}
{def $all = fetch( 'content', 'node', hash( 'node_id', 1,
                                            'node_path', 'node_path',
                                            'language_code', 'language_code',
                                            'remote_id', 'remote_id' ) )}
```

In PHP, the same function through the function handler (`lib/ezutils/classes/ezfunctionhandler.php`):

PHP

```
$result = eZFunctionHandler::execute( 'content', 'node', array( 'node_id' => 1 ) );
```

In a shipped template

The first use in the templates of this installation, `design/admin/templates/content/browse_mode_list.tpl` line 2:

Template

```
{def $swap_node = fetch( 'content', 'node', hash( 'node_id', $browse.persistent_data.ContentNodeID ) )}
```
