fetch('content', 'version_list')

The fetch function version_list of the content module: 4 parameter(s), 1 required.

Source file: doc/eng-us/examples/fetch-functions/content/version_list.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/fetch-functions/content/version_list.md

Defined in `kernel/content/function_definition.php`; it calls `eZContentFunctionCollection::fetchVersionList()` (`kernel/content/ezcontentfunctioncollection.php`). Operation type: read.

Parameters

Parameter	Type	Required	Default
contentobject	object	yes	
offset	integer	no	false
limit	integer	no	false
sorts	array	no	null

Example

In a template (the values are placeholders of each parameter's type):

Template

```
{def $result = fetch( 'content', 'version_list', hash( 'contentobject', $contentobject ) )}
{* with every parameter *}
{def $all = fetch( 'content', 'version_list', hash( 'contentobject', $contentobject,
                                                    'offset', 1,
                                                    'limit', 1,
                                                    'sorts', array() ) )}
```

In PHP, the same function through the function handler (`lib/ezutils/classes/ezfunctionhandler.php`):

PHP

```
$result = eZFunctionHandler::execute( 'content', 'version_list', array( 'contentobject' => $conte
ntobject ) );
```
