fetch('datatable', 'list')

The fetch function list of the datatable module: 5 parameter(s), 1 required.

Source file: doc/eng-us/examples/fetch-functions/datatable/list.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/fetch-functions/datatable/list.md

Defined in kernel/datatable/function_definition.php; it calls expDataTableFunctionCollection::fetchList() (kernel/classes/datatable/expdatatablefunctioncollection.php).

Parameters

Parameter	Type	Required	Default
class	string	yes	
conditions	array	no	false
sort	array	no	false
offset	integer	no	0
limit	integer	no	50

Example

In a template (the values are placeholders of each parameter's type):

Template

```
{def $result = fetch( 'datatable', 'list', hash( 'class', 'class' ) )}
{* with every parameter *}
{def $all = fetch( 'datatable', 'list', hash( 'class', 'class',
                                              'conditions', array(),
                                              'sort', array(),
                                              'offset', 0,
                                              'limit', 50 ) )}
```

In PHP, the same function through the function handler (lib/ezutils/classes/ezfunctionhandler.php):

PHP

```
$result = eZFunctionHandler::execute( 'datatable', 'list', array( 'class' => 'class' ) );
```
