fetch('section', 'object_list_count')

The fetch function object_list_count of the section module: 2 parameter(s), 1 required.

Source file: `doc/eng-us/examples/fetch-functions/section/object_list_count.md` Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/fetch-functions/section/object_list_count.md

Defined in `kernel/section/function_definition.php`; it calls `eZSectionFunctionCollection::fetchObjectListCount()` (`kernel/section/ezsectionfunctioncollection.php`).

Parameters

Parameter	Type	Required	Default
section_id	integer	yes	
status	string	no	false

Example

In a template (the values are placeholders of each parameter's type):

Template

```
{def $result = fetch( 'section', 'object_list_count', hash( 'section_id', 1 ) )}
{* with every parameter *}
{def $all = fetch( 'section', 'object_list_count', hash( 'section_id', 1,
                                                         'status', 'status' ) )}
```

In PHP, the same function through the function handler (`lib/ezutils/classes/ezfunctionhandler.php`):

PHP

```
$result = eZFunctionHandler::execute( 'section', 'object_list_count', array( 'section_id' => 1 )
);
```
