fetch('switchlanguage', 'url_alias')

The fetch function url_alias of the switchlanguage module: 3 parameter(s), 1 required.

Source file: `doc/eng-us/examples/fetch-functions/switchlanguage/url_alias.md` Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/fetch-functions/switchlanguage/url_alias.md

Defined in `kernel/private/modules/switchlanguage/function_definition.php`; it calls `ezpLanguageSwitcherFunctionCollection::fetchUrlAlias()` (`kernel/private/modules/switchlanguage/ezpLanguageSwitcherFunctionCollection.php`).

Parameters

Parameter	Type	Required	Default
node_id	integer	no	false
path	string	no	false
locale	string	yes	false

Example

In a template (the values are placeholders of each parameter's type):

Template

```
{def $result = fetch( 'switchlanguage', 'url_alias', hash( 'locale', 'locale' ) )}
{* with every parameter *}
{def $all = fetch( 'switchlanguage', 'url_alias', hash( 'node_id', 1,
                                                        'path', 'path',
                                                        'locale', 'locale' ) )}
```

In PHP, the same function through the function handler (`lib/ezutils/classes/ezfunctionhandler.php`):

PHP

```
$result = eZFunctionHandler::execute( 'switchlanguage', 'url_alias', array( 'locale' => 'locale'
) );
```
