setup.ini [phpversion]

The settings of [phpversion] in setup.ini: MinimumVersion, SupportedVersion, UnstableVersions

Source file: doc/eng-us/examples/ini-settings/setup/phpversion.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/ini-settings/setup/phpversion.md

The block `[phpversion]` of `settings/setup.ini`, with 3 setting(s).

Never edit `settings/setup.ini` itself: an update replaces it. Put the settings you change in an override, which wins over the shipped file:

- `settings/override/setup.ini.append.php` for every siteaccess,
- `settings/siteaccess/<siteaccess>/setup.ini.append.php` for one siteaccess,
- `extension/<extension>/settings/setup.ini.append.php` in an extension (read when the extension is active).

MinimumVersion

> Supported: PHP 8.0 to 8.5. Usable without support: PHP 7.4 (Exponential 6.0.15 and later). MinimumVersion: older PHP is refused. SupportedVersion: below it the check passes with an
> "unsupported" notice (no bug-fix or security commitment; the features that need PHP 8 are missing).
