# /datatable/conflicts

The view datatable/conflicts: its address, parameters and the policy functions it needs.

Source file: doc/eng-us/examples/module-views/datatable/conflicts.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/module-views/datatable/conflicts.md

A view of the `datatable` module, defined in `kernel/datatable/module.php` and run by `kernel/datatable/conflicts.php`.

## Address

```
/datatable/conflicts/(sync)/<SyncID>/(offset)/<Offset>
```

Unordered parameters, in any order as `/(name)/value`: `(sync)` sets `SyncID`, `(offset)` sets `Offset`.

## Who may open it

The user needs this policy function:

- `datatable/sync`

A policy on `datatable/*` (every function) also grants it; limitations of the policy (section, subtree, class ...) still apply where the view checks them.

## Details

| Key | Value |
|---|---|
| Navigation part | ezsetupnavigationpart |

## Example

A link in a template (`ezurl` adds the siteaccess and quotes the address); the parameter values are placeholders:

**Template**

```
<a href={'/datatable/conflicts'|ezurl}>datatable/conflicts</a>
<a href={concat( '/datatable/conflicts/(sync)/', 1 )|ezurl}>datatable/conflicts</a>
```

From PHP, the redirect a view gives after it has done its work:

**PHP**

```
return $Module->redirectTo( '/datatable/conflicts' );
```
