/error/view

The view error/view: its address, parameters and the policy functions it needs.

Source file: doc/eng-us/examples/module-views/error/view.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/module-views/error/view.md

A view of the `error` module, defined in `kernel/error/module.php` and run by `kernel/error/view.php`.

Address

```
/error/view/<Type>/<Number>/<ExtraParameters>
```

Ordered parameters, in this order after the view name: `Type`, `Number`, `ExtraParameters`.

Who may open it

The view names no policy function, so the user needs a policy for the whole module: `error/*` (every function of the module) in one of the roles assigned to them.

Example

A link in a template (`ezurl` adds the siteaccess and quotes the address); the parameter values are placeholders:

Template

```
<a href={'/error/view/type/1/extraparameters'|ezurl}>error/view</a>
```

From PHP, the redirect a view gives after it has done its work:

PHP

```
return $Module->redirectTo( '/error/view/type/1/extraparameters' );
```
