# /section/view

The view section/view: its address, parameters and the policy functions it needs.

Source file: doc/eng-us/examples/module-views/section/view.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/module-views/section/view.md

A view of the `section` module, defined in `kernel/section/module.php` and run by `kernel/section/view.php`.

## Address

```
/section/view/<SectionID>/(offset)/<Offset>
```

Ordered parameters, in this order after the view name: `SectionID`.

Unordered parameters, in any order as `/(name)/value`: `(offset)` sets `Offset`.

## Who may open it

The user needs this policy function:

- `section/view` or `section/assign`

A policy on `section/*` (every function) also grants it; limitations of the policy (section, subtree, class ...) still apply where the view checks them.

## Details

| Key | Value |
|---|---|
| Navigation part | ezsetupnavigationpart |
| UI context | view |

## Example

A link in a template (`ezurl` adds the siteaccess and quotes the address); the parameter values are placeholders:

**Template**

```
<a href={'/section/view/1'|ezurl}>section/view</a>
<a href={concat( '/section/view/1/(offset)/', 1 )|ezurl}>section/view</a>
```

From PHP, the redirect a view gives after it has done its work:

**PHP**

```
return $Module->redirectTo( '/section/view/1' );
```
