/url/view

The view url/view: its address, parameters and the policy functions it needs.

Source file: doc/eng-us/examples/module-views/url/view.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/module-views/url/view.md

A view of the `url` module, defined in `kernel/url/module.php` and run by `kernel/url/view.php`.

Address

```
/url/view/<ID>/(offset)/<Offset>
```

Ordered parameters, in this order after the view name: `ID`.

Unordered parameters, in any order as `/(name)/value`: `(offset)` sets `Offset`.

Who may open it

The view names no policy function, so the user needs a policy for the whole module: `url/*` (every function of the module) in one of the roles assigned to them.

Details

Key	Value
Navigation part	ezsetupnavigationpart
Single POST actions	EditObject: EditObject

Example

A link in a template (`ezurl` adds the siteaccess and quotes the address); the parameter values are placeholders:

Template

```
<a href={'/url/view/1'|ezurl}>url/view</a>
<a href={concat( '/url/view/1/(offset)/', 1 )|ezurl}>url/view</a>
```

From PHP, the redirect a view gives after it has done its work:

PHP

```
return $Module->redirectTo( '/url/view/1' );
```
