The class_attribute_edit_gui template function

Registered in `kernel/common/eztemplateautoload.php` by the class `eZObjectForwarder` (`kernel/common/ezobjectforwarder.php`). The same class also handles: attribute_edit_gui, attribute_view_gui, attribute_result_gui, attribute_pdf_gui, attribute_diff_gui, related_view_gui, node_view_gui, content_view_gui, content_pdf_gui, shop_account_view_gui, content_version_view_gui, collaboration_view_gui, collaboration_icon, collaboration_simple_message_view, collaboration_participation_view, event_edit_gui, event_view_gui, class_attribute_view_gui.

How it finds its template

From the forward rule in `eZObjectForwardInit()` (`kernel/common/eztemplateautoload.php`):

Key	Value
template_root	'class/datatype/edit'
input_name	'class_attribute'
output_name	'class_attribute'
namespace	'ClassAttribute'
use_views	false

Template

```
{class_attribute_edit_gui class_attribute=$class_attribute}
```

The variable name is the rule's `input_name`; the value is a placeholder.

In a shipped template

The first use in the templates of this installation, `design/admin/templates/class/edit.tpl` line 212:

Template

```
<div class="a4-class-datatype">{class_attribute_edit_gui class_attribute=$Attributes.item}</div>
```
