break template operator

The break template operator: no named parameters, registered by eZTemplateStringOperator.

Source file: doc/eng-us/examples/template-operators/break.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/break.md

The break template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateStringOperator` (`lib/eztemplate/classes/eztemplatestringoperator.php`). The same class also registers: upcase, downcase, count_words, count_chars, trim, wrap, upfirst, upword, simplify, trim, wash, chr, ord, shorten, pad.

Parameters

None.

The operator works on its input: the value before `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{$value|break}
```

In a shipped template

The first use in the templates of this installation, `design/admin/override/templates/admin_preview/comment.tpl` line 14:

Template

```
<p>{$node.data_map.message.content|wash(xhtml)|break|wordtoimage|autolink}</p>
```
