fetch template operator

The fetch template operator: 3 parameter(s), registered by eZTemplateExecuteOperator.

Source file: doc/eng-us/examples/template-operators/fetch.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/fetch.md

The fetch template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateExecuteOperator` (`lib/eztemplate/classes/eztemplateexecuteoperator.php`). The same class also registers: fetch_alias.

Parameters

Parameter	Type	Required	Default
module_name	string	yes	false
function_name	string	yes	false
function_parameters	array	no	array()

The operator takes no input: it is called on its own, not after `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{fetch( 'module_name', 'function_name', array() )}
```

In a shipped template

The first use in the templates of this installation, `design/admin/override/templates/admin_preview/company.tpl` line 36:

Template

```
{node_view_gui view=line content_node=fetch( content,node,hash(node_id,$:item.node_id ) )}
```
