fetch_alias template operator

The fetch_alias template operator: 2 parameter(s), registered by eZTemplateExecuteOperator.

Source file: doc/eng-us/examples/template-operators/fetch_alias.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/fetch_alias.md

The fetch_alias template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateExecuteOperator` (`lib/eztemplate/classes/eztemplateexecuteoperator.php`). The same class also registers: fetch.

Parameters

Parameter	Type	Required	Default
function_name	string	yes	false
function_parameters	array	no	array()

The operator takes no input: it is called on its own, not after `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{fetch_alias( 'function_name', array() )}
```

In a shipped template

The first use in the templates of this installation, `design/admin/templates/setup/templateoperator.tpl` line 70:

Template

```
<span class="a4-help">{'{fetch_alias( news_list )\} — a fetch with its arguments fixed in an ini.
'|i18n( 'design/admin/setup/rad/template' )}</span>
```
