hash template operator

The hash template operator: no named parameters, registered by eZTemplateArrayOperator.

Source file: doc/eng-us/examples/template-operators/hash.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/hash.md

The hash template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateArrayOperator` (`lib/eztemplate/classes/eztemplatearrayoperator.php`). The same class also registers: array, array_prepend, prepend, array_append, append, array_merge, merge, contains, compare, extract, extract_left, extract_right, begins_with, ends_with, implode, explode, repeat, reverse, insert, remove, replace, unique, array_sum.

Parameters

None.

The operator works on its input: the value before `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{$value|hash}
```

In a shipped template

The first use in the templates of this installation, `design/admin/override/templates/admin_preview/company.tpl` line 36:

Template

```
{node_view_gui view=line content_node=fetch( content,node,hash(node_id,$:item.node_id ) )}
```
