image template operator

The image template operator: no named parameters, registered by eZTemplateImageOperator.

Source file: `doc/eng-us/examples/template-operators/image.md` Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/image.md

The image template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateImageOperator` (`lib/eztemplate/classes/eztemplateimageoperator.php`). The same class also registers: texttoimage, imagefile.

Parameters

None.

The operator takes no input: it is called on its own, not after `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{image}
```
