is_numeric template operator

The is_numeric template operator: no named parameters, registered by eZTemplateTypeOperator.

Source file: doc/eng-us/examples/template-operators/is_numeric.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/is_numeric.md

The is_numeric template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateTypeOperator` (`lib/eztemplate/classes/eztemplatetypeoperator.php`). The same class also registers: is_array, is_boolean, is_integer, is_float, is_string, is_object, is_class, is_null, is_set, is_unset, get_type, get_class.

Parameters

None.

The operator works on its input: the value before `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{$value|is_numeric}
```

In a shipped template

The first use in the templates of this installation, `design/admin/templates/setup/languages.tpl` line 90:

Template

```
<td>{if $language_extension.coverage|is_numeric}<span class="a4-meter a4-setup-languages-meter{if
 $language_extension.pct|ge( 100 )} is-ok{/if}" aria-hidden="true"><span class="a4-pct-{$language
_extension.pct}"></span></span> {$language_extension.pct} %{else}<span class="a4-muted">{'English
 source texts'|i18n( 'design/admin/setup/languages' )}</span>{/if}</td></tr>
```
