repeat template operator

The repeat template operator: 1 parameter(s), registered by eZTemplateArrayOperator.

Source file: doc/eng-us/examples/template-operators/repeat.md Last changed 2026-11-04
https://doc.exponential.earth/learninminutes/exphelp/viewer/examples/template-operators/repeat.md

The repeat template operator

Registered in `lib/eztemplate/classes/eztemplateautoload.php` by the class `eZTemplateArrayOperator` (`lib/eztemplate/classes/eztemplatearrayoperator.php`). The same class also registers: array, hash, array_prepend, prepend, array_append, append, array_merge, merge, contains, compare, extract, extract_left, extract_right, begins_with, ends_with, implode, explode, reverse, insert, remove, replace, unique, array_sum.

Parameters

Parameter	Type	Required	Default
repeat_times	integer	no	1

The operator works on its input: the value before `|`.

Example

Built from the parameter list above; the values are placeholders (the operator's template hints decide whether it takes an input).

Template

```
{$value|repeat( 1 )}
```

In a shipped template

The first use in the templates of this installation, `design/admin/templates/content/upload.tpl` line 138:

Template

```
<option value="{$selection.node_id}">{' '|repeat( sub( $selection.depth, $root_node.depth, 1
 ) )}{$selection.name|wash}</option>
```
