The expdatatablemirror workflow event (Mirror to data tables)

Class `expDataTableMirrorType` in `kernel/classes/workflowtypes/event/expdatatablemirror/expdatatablemirrortype.php`; in a workflow it is the event type `event_expdatatablemirror`, listed in `settings/workflow.ini` `[EventSettings]` `AvailableEventTypes[]`.

It may be used on these triggers only (`setTriggerTypes()`): `content/publish` `(after)`.

Use it

1. Setup > Workflows: create a workflow in a group and add the event "Mirror to data tables"; fill in its settings.
2. Setup > Triggers: connect the workflow to a trigger, for example `content` / `publish` / `before` (see the triggers).
3. Workflows that wait (approval, a date) continue when the cronjob part `frequent` runs `workflow.php` (see the cronjobs).

To offer it (it is shipped in the list unless noted above):

INI

```
<?php /* #?ini charset="utf-8"?
# settings/override/workflow.ini.append.php
[EventSettings]
AvailableEventTypes[]=event_expdatatablemirror
*/ ?>
```

Its templates:
`design/standard/templates/workflow/eventtype/edit/event_expdatatablemirror.tpl`,
`design/standard/templates/workflow/eventtype/view/event_expdatatablemirror.tpl`.
